

Education Services: A Part of the Solution Assurance Services Framework

When it comes to network security initiatives, the protection of your business is at stake. This is why thousands of companies depend on the Palo Alto Networks® next-generation firewall to provide safe application enablement of network traffic.

As with any of your network security measures, the best path to success depends on ensuring that the team responsible for managing and operating the system has the proper training, skills and expertise

Education Services from Palo Alto Networks significantly increases the knowledge and ability of product operators, quickly, conveniently, and with minimal investment.

When armed with knowledge of important product capabilities and best practices for installation, configuration, and operation, organizations will make better decisions up front. This results in a more complete, accurate, and trouble-free deployment. When equipped with best practices for managing and supporting the next-generation firewall, companies are able to minimize disruption, and maximize protection of their business.

Reduce risk, minimize disruption, and maximum threat protection. Whether you are a seasoned security analyst, or new to security systems, Education Services from Palo Alto Networks will help you achieve greater success and value from the next-generation firewall.

EXPERTISE, ACCREDITATION, CERTIFICATION

In order to maximize the value of your investment in the next-generation firewall, it is essential to fully understand important and advanced capabilities specific to Palo Alto Networks. The training from Palo Alto Networks complements industry knowledge and experience, with a deep dive into the Palo Alto Networks firewall, allowing you to maximize business protection, and attain the value you expect.

Courses from Palo Alto Networks Education Services deliver the foundation of knowledge and expertise necessary to effectively manage the next-generation firewall, and ensure your business is secure from dangerous threats. Our Accreditation and Certification options establish a benchmark for personnel, providing additional assurance that they are prepared to operate and manage the next-generation firewall.

“The Palo Alto Networks product training was invaluable. The clarity provided by the Education Team helped us understand the concepts right away. We were able to accomplish our project and meet our deadline with ease.”

Lee Chin Seng

Senior Lecturer

**School of InfoComm
Technology (ICT)
Ngee Ann Polytechnic (NP)**

Expertise – The following training courses are offered:

Palo Alto Networks Essentials 1 (EDU-201): 3 Days - Provides foundation training on how to install, configure, and manage the Palo Alto Networks next-generation firewall. In addition, students will learn about PAN-OS security, networking, threat prevention, logging, and reporting features. All project personnel with a technical role should complete this course in order to understand the fundamental principles and features of the next-generation firewall.

Palo Alto Networks Essentials 2 (EDU-205): 2 Days – Teaches advanced concepts to install, configure, and manage the system. In addition, it also provides the foundational knowledge and best practices for troubleshooting. Finally, participants will learn the basics of implementing and managing GlobalProtect and High Availability. This course is suitable for architects, network engineers and operations engineers working with the next-generation firewall. *Prerequisite: Essentials 1 (EDU-201)*

Palo Alto Networks Advanced Troubleshooting (EDU-311): 3 Days – Provides extensive training for supporting and troubleshooting Palo Alto Networks next-generation firewalls. The coursework and labs focus on how to diagnose and solve common problems using various diagnostic and administrative tools. This course is suitable for network engineers and network operations team members. *Prerequisite: Essentials 1 (EDU-201) and Essentials 2 (EDU-205)*

Accreditations and Certifications:**Palo Alto Networks Accredited Configuration Engineer (ACE Accreditation)**

Upon successful completion of Essentials 1 (EDU-201), students may choose to take the Palo Alto Networks Accredited Configuration Engineer (ACE) exam. A student passing this exam receives the title of Palo Alto Networks Accredited Configuration Engineer. This achievement indicates that the student understands the basics to install, configure, and maintain a Palo Alto Networks next-generation firewall.

Palo Alto Networks Certified Network Security Engineer (CNSE Certification)

Certified Network Security Engineer (CNSE) certification is the premier benchmark for Palo Alto Networks security professionals. Students who achieve this certification demonstrate an in-depth and advanced understanding of product features, installation procedures and configuration steps.

Convenient Delivery Options

Training is available in several different ways to make it easy to participate. Courses are available in several different venues, providing the means for local, remote, and electronic learning around the world.

Public Classroom: Public open-enrollment classes are provided through Palo Alto Networks authorized partner training centers worldwide. These courses are led by highly qualified, certified instructors, ensuring that all students receive a consistent, high-quality learning experience at any authorized partner training center around the globe. For a list of upcoming courses, please visit: <http://education.paloaltonetworks.com>

Virtual (live online): Palo Alto Networks offers virtual live online classes as an alternative to traditional classroom instruction. Our virtual classes provide the same live lecture and hands-on lab learning experience, without the travel time and expense.

Private On-Site: On-site courses provide the same in person instructor led lecture and lab as traditional classroom offerings, without requiring students to travel to an authorized training center. Students complete the lab work by accessing the training environment via remote access. In addition, these courses may also be tailored for specific customer requirements in order to provide the most relevant learning experience. Private on-site courses are available for single customers with 5 or more staff in need of training.

eLearning: Palo Alto Networks has a library of eLearning coursework, which includes the material from Essentials 1, available for free. Students study the material at their own pace, and take quizzes to check their understanding of the material. eLearning does not contain lab training. Students may not use the eLearning courses to fulfill Essentials 1 prerequisites for advanced training, and do not apply towards ACE accreditation or CNSE certification.
